
$N = 20$, 100 DLL resets, $p = 1/4$, $\Gamma = 20$, $J \leq 100$
Dense scan; best of both factor orders
Best on this grid
Reservoir cosine $\cos\sqrt{2\Gamma\tau}$
Hamiltonian rotation $J\tau$
Maximum final population error
Search through large rotation phases
Final population error
Dense: 0–20
Dense: 20–1000
Best sampled per logarithmic bin
Required: 0.001
Best found: 0.07365
Hamiltonian rotation $J\tau$
