Reset survival versus idle waiting: 2048 shots per circuit
Pointwise 95% Wilson intervals; unknown reset-block latency and device drift are excluded
left: system q49, initially 1
right: system q95, initially 1
left: system q49, initially 0
right: system q95, initially 0
System excitation population
Wait time (us); reset positions use target model
Descriptive idle fit, tau=196 us
Descriptive idle fit, tau=241 us
Fresh zero baseline
Idle: all three scales
Bath reset from 0
Bath X + reset
Fresh baseline
